

# OPUS ONE® MEDICAL HOOD

The medical hood is used to protect against hazardous substances or against contamination of sensitive products and during work operations. Depending on the toxicity of the hazardous substance and the exposure conditions, it is used to protect against contact with particles, liquids in the form of a jet or spray mist and fine toxic particles. The visor in the hood allows for optimal visibility and permits fine and time-consuming work. The visor has a special nano-technological coating, which prevents fogging. Due to the special shape of the visor, visual accessories such as eyeglasses can be worn without any problems. The noseband with sealing tape prevents fogging of the visual accessories.

## Hood details:

- Material: DuPont™ Tyvek®, visor Melinex® FS1
- EN149, EN1149-1
